

# Research Associate in Immune Cell Biology & Tissue Repair

## *Weavers Lab, University of Bristol*

A Post-doctoral Position is available in the group of Dr Helen Weavers to start from Summer/Autumn 2024. This is an exciting opportunity to explore **immune cell biology and tissue repair, and their dysregulation with age and disease.**

The lab takes a multi-disciplinary approach, integrating state-of-the-art microscopy, laser ablation, cell biology, 'omics, biophysics, computational methods and human genetic epidemiology. We use *Drosophila* for unparalleled opportunities to probe the subcellular dynamics of the immune response and tissue repair live *in vivo*.

A variety of projects are available, following up recent findings from the team (e.g. Clemente & Weavers *J Cell Biol* 2023; Turley et al. *eLife* 2023; Weavers et al. *Current Biology* 2019; Thuma et al. *J Cell Biol* 2018). For further details, see **job advert** (QR code) and our lab website **<https://tissueresilience.com>**.
