

Specialist Research Technician

Weavers Lab, University of Bristol

A Wellcome Trust funded Specialist Technician position is available in the group of Dr Helen Weavers from Summer/Autumn 2026, to support our cutting-edge studies on the **dynamic cell biology** underlying **tissue resilience to damage**, and its **dysregulation in ageing and disease**.

We employ an interdisciplinary approach that combines *in vivo* studies in *Drosophila* (with state-of-the-art live-imaging, genetics, molecular cell biology, 'omics) with innovative technologies and collaborative works on mammalian and human tissue. As well as designing and performing laboratory experiments, you will train others, support lab maintenance tasks (e.g. sourcing consumables) and ensure that the lab is prepared for experimentation.

For further details, please see the online advert (search for SUPP113440 on www.bristol.ac.uk/jobs/find/) and our group website <https://tissueresilience.com>.
